

WHERE IS FENIX

TECHNICAL & HOSPITALITY RIDER

Technical:

- **MIXER**
Allen & Heath Xone96/92 or Pioneer DJM -900 NSX2 (Xone96 First Choice)
- **CDJ & Technic Requirements**
3x Pioneer CDJ-3000 or CDJ-2000NXS2 **Connected to channels 1, 2 & 3 - Linked through Ethernet hub**
(Please have two extra Ethernet hubs for emergency backups)
1x Technic Turntable (SL 1210 MK II OR SL 1210 M5G) **Placed on the outer right side of the booth set up connected to channel 4.**
1x Ortofon Stylus CC MKII Club OR Ortofon Scratch MKII (**white**)
- **Turntable(s) Isolation:**
1 - Please avoid putting the turntable and speakers on the same surface. Vibrations transmit through surface causes feedback.
NOTE: Preferably the table used for the booth should not be on the same surface of the stage where the monitors are placed.
2 - The Turntables must be set up with a proper Isolation feet System that, effectively reduces vibration / lessens feedback, especially in high-SPL environments such as nightclubs / live performance venues. ISONOE System works good for the legs but most of the times is not 100% effective. (Please follow the Step 3)
3. THIS STEP IS MANDATORY. Turntable(s) must be set up individually on top of a HEAVY STONE or CONCRETE PLATE and with 4 Squash balls as legs. Every squash ball must be located on every corner of the plate - This system works perfect.

- **MONITORING:**
2x monitors connected in Stereo. Volume adjustable from the DJ mixer and placed only at ear height or above on each side.
NOTE: Please make sure that there is no feedback with the turntable(s).
IMPORTANT:
Monitor power must be derived from a power source other than that of the house system

IF ANY OF THESE PIECES OF EQUIPMENT IS NOT AVAILABLE, PLEASE CONTACT MANAGEMENT RIGHT AWAY
